

Money back Guarantee

We guarantee the Damp Stop Positive Input Ventilation Systems will eradicate surface condensation and mould related problems and prevent the re-occurrence of the same conditions.

Testimonial

I have lived in my property for 29 years in Bishop Auckland, up until 3 years ago my house suffered severe condensation.

We had a damp problem in the dining room and discussed having a unit in the attic to stop the condensation issue. I could not believe this unit could stop the amount of water our house was making, my daughters health was suffering from mould accumulation in her bedroom, I eventually surrendered to requests from my wife and had the unit fitted.

In the 3 years that we have had this unit we have suffered NO condensation at all, I could not believe the difference this unit has made to my house, anyone who has condensation issues I would recommend having this unit fitted, it works, this is from the most skeptical person around, but please if you have the same problems that I had this unit will make a huge difference to your property.'

STOP CONDENSATION FOREVER

Condensation affects homes and is a major cause of environmental dampness within a property.

Left untreated it can cause many health issues as well as damage to your property decor and structure.

Thankfully - we have the solution.

The Condensation Solution

At Damp Stop we are passionate about curing condensation which is why we offer whole house ventilation systems designed to deliver homes with fresh, filtered air. This effectively cures all condensation.

High humidity is very common in properties these days, as our drive for energy efficiency has seen houses built more tightly and effectively 'sealed' up with insulation and double glazing. As we cook, bathe and breathe, up to four pints of moisture per person, per day gets trapped in our home.

This creates 'condensation dampness', a condition that affects many homes and has probably become the major cause of 'environmental dampness' within a property. Condensation is worse in homes which are poorly heated and poorly insulated and, of course, gets much worse in the colder winter months.

If you want a full and final solution for your condensation we offer a guaranteed cure. It is the most effective, energy efficient, and cost effective solution.

We offer a whole house ventilation system which includes a Positive Pressure FLAT or LOFT unit and humidistat controlled extractor fans, where required.

These units control condensation in your home using the loft space. The unit gently ventilates your home from a central position on the landing or hallway to transform a stagnant and stale atmosphere into a fresh, healthy and condensation free environment. Sounds great doesn't it!

Positive Pressure Unit

In order for the unit to be effective throughout the property, it will be necessary to ensure a minimum door clearance of 10mm at the foot of each door. This is the normal clearance on most doors anyway. The units require a simple service and filter change annually to ensure they run efficiently. We can do this for a small fee. We recommend fitting humidistat extractor

Condensation on windows

fans with timer to moisture producing areas, i.e. kitchen and bathroom. These enable you to control the relative humidity within a room and keep it at a constant, selectable level. The timer keeps the fan running between 2 and 20 minutes after humidity reaches an acceptable level.

We also offer a mould clean service. Mould growth is a nasty thing and we understand the frustration and distress that is caused by having it in your property.

You may have tried to remove the mould yourself by using bleach, or something similar, only to find it does not kill the mould. The problem may have got worse.

We offer a definite solution by treating the contaminated areas with cleaning agents. Chemicals specially designed to destroy the mould structure and thus preventing the mould spreading and re-developing.

Mountain fresh air in your home

The first thing you will notice after the ventilation system is installed is the refreshing air quality and change in atmosphere within the property. This shows that clean, freshly filtered air is now being distributed into your home.

By investing in this wonderful, refreshing air system you will not only resolve your condensation problems but you will save money on redecorating and the replacement of any damaged fixtures and fittings.

Wall mounted unit if loft space is limited

Features and Benefits of the Whole Home Ventilation System:

- Reduces and eliminates surface condensation
- Removes musty odours
- Whisper quiet
- Reduces heating costs
- Eliminates mould
- Benefits asthma sufferers
- Stops streaming windows
- Low running costs
